## IN THE CLAIMS

- 1. 13. (Canceled)
- 14. (Currently Amended) A method for configuring a remote computer for a voice over data packet network call comprising the steps of:

downloading an applet to an end user computer;

executing the applet at the end user computer, the applet being operable to cause an audible tone at a predetermined volume to be produced by a speaker connected to the end user computer and adjust a media setting in accordance with a parameter of time delay between the audible tone and a sound corresponding to the audible tone detected by a microphone connected to the end user computer.

- 15. 16. (Canceled)
- 17. (Original) The method of Claim 14, wherein the media setting is echo suppression.
- 18. (Original) The method of Claim 14, wherein the media setting is echo cancellation.
- 19. (Original) The method of Claim 14, wherein the media setting is microphone volume.
  - 20. (Original) The method of Claim 14, wherein the media setting is speaker volume.
- 21. (New) A method for configuring a remote computer for a voice over data packet network call comprising the steps of:

downloading an applet to an end user computer;

executing the applet at the end user computer, the applet being operable to cause an audible tone at a predetermined volume to be produced by a speaker connected to the end user computer and adjust a media setting in accordance with an amplitude of a sound corresponding to the audible tone detected by a microphone connected to the end user computer.

22. (New) The method of Claim 21, wherein the media setting is echo suppression.

- 23. (New) The method of Claim 21, wherein the media setting is echo cancellation.
- 24. (New) The method of Claim 21, wherein the media setting is microphone volume.
- 25. (New) The method of Claim 21, wherein the media setting is speaker volume.
